Campaign Rules

In order to improve the on chain governance structure of DNA foundation and to develop the DNA community, it is necessary to introduce strong global supernodes. The purpose of the DNA supernodes campaign is to select 23 blockchain teams in line with the community development goals, and build supernodes with multiple identities including technology nodes, management nodes, market nodes and application nodes.

1. **Basic Requirements of Nodes**
   a. Operation and Management Capabilities:
      The team needs to pay a deposit to the foundation to prove that it has the ability to operate and manage the supernode.
   b. Team:
      In addition to team leaders, the team should also have talents with technical, research, market, and other professional skills to ensure the efficient and stable operation of the node and bring value to the DNA network.
   c. Integrity:
      The DNA network, like any other blockchain, its core values are the trust of data and nodes, so the integrity of supernodes is an indispensable requirement. At the same time, we are also pioneers in the frontier of innovation. If we don't have passion, we will lose the drive to push further.
   d. Other software and hardware requirements are subject to the information provided on the official website, mainly focusing on technology and community governance, which can be gradually built after the candidate node is elected.

2. **Rights of Nodes**

   A node is not only the spokesperson for the development of the network, but also the model for other community developers. Therefore, nodes enjoy the corresponding management rights. The limits of these rights also depend on the limits of DNA network, so the development of the network will become the most important aspect of the supernodes. At present, the rights enjoyed by supernodes are as follows:

   a. Promote campaign to the community to gain voting support.
   b. Recommend application projects to the community.
   c. Propose mainnet upgrades and modify community incentive rules.
   d. Carry out online and offline community development activities representing a supernode of the DNA community.
   e. Participate in online governance and management of the DNA mainnet, such as transaction arbitration, blacklist management, etc.

3. **Obligations of Nodes**

   Nodes need to fulfill various obligations to serve the DNA network. The content of obligations may be expanded or amended. If the obligations of the node are not implemented, the foundation has the right to warn the node team, or even revoke its qualification for election. At present, the team needs to commit to the following obligations:

   a. Before the mainnet goes online, supernodes need to complete the campaign development and fulfill the campaign agreement.
   b. After the mainnet goes online, supernodes must be online 24 hours a day.
   c. After the mainnet goes online, supernodes must ensure that each block reward distribution is carried out in accordance with the announced plan.

IMPORTANT STATEMENT	The DNA foundation has not and does not support any proxy voting. Supporters and the participating teams of supernodes are invited to vote through officially recognized channels, and votes will be based on the official data. If any irregularities are found, the foundation will disqualify the team.
